Panel on Information Technology and Broadcasting

Establishing a Unified Information and Communications Technology

Professional Recognition Framework in Hong Kong

I support the proposal to establish a unified information and communications technology (ICT) professional recognition framework in Hong Kong with the following views.

1) This framework shall provide an efficient and sustainable mean for HK to set up its own ICT professional qualification scheme yet recognized internationally by other countries from time to time.
2) This unified framework helps to set and refine the requirements and standard so that the qualification of the HK ICT professionals would be recognized globally and increasing their competitiveness. This will also help HK SAR to further develop its ICT industry as one of its major assets.
3) With the setup of the Awarding Body to administrate the Framework, clearer objectives attract more talent young people to join the ICT career so that more qualified ICT professionals will be nurtured and contributing to our local society.
