Panel on Information Technology and Broadcasting

Special meeting on
Saturday, 17 May 2014, at 9:00 am
in Conference Room 1 of the Legislative Council Complex

Proposal to establish a unified information and communications technology professional recognition framework in Hong Kong

1. It is good intention to raise professional services element in major Industries of Hong Kong thus to **increase more measurable values of Hong Kong**. Professional services requires years of best I.T. practices, quality to deliver required results & commitment to international required work process. In the meantime, IT practitioners are not being recognized as qualifying professional workers. For this reason IT related services is difficult to increase source of income, cannot quote professional rate to customers in Hong Kong, the international and Mainland China markets. Therefore, A qualification scheme must be in place for keeping HONK KONG as one of the important sources for providing IT professional services;
2. Recognition of I.T. professionals in the International market place thus IT professionals of Hong Kong will align similar recognition with international I.T. professional framework/platform. This is much required in today's international city, though IT professionals in Hong Kong may be small in size, we may not be able to compete in quantity, but **we can compete in quality and competence**.
